Product Requirements Document (PRD)

1. Project Overview

The platform is a **home service management and subscription-based service platform** consisting of three major applications:

1. **Admin Panel**
2. **User App**
3. **Provider App**

The platform will allow users to purchase prepaid service plans, maintain a service wallet, raise home-service requests, upload issue-related videos, schedule bookings, communicate with the admin/provider, and get services completed at their home.

The Admin Panel will act as the central control system for managing users, providers, subscriptions, bookings, categories, services, disputes, payments, bills, banners, live chats, and overall platform operations.

---

2. System Architecture

2.1 Admin Panel

The Admin Panel will control the complete platform.

Main modules:

- Dashboard
- User Management
- Provider Management
- Subscription Plan Management
- Wallet Management
- Booking Management
- Category Management
- Sub-Category Management
- Service Management
- Banner Management
- Dispute Management
- Live Chat
- Billing & Invoices
- Payments & Transactions
- Notifications
- Provider Assignment

- Booking Status Management
- Reports & Analytics
- Admin Profile
- Settings

2.2 User App

The User App will allow customers to:

- Register/Login
- Verify mobile number using OTP
- Complete profile
- Purchase subscription plans
- Add money to wallet through plans
- Upload/record home video
- Browse categories and services
- Create service bookings
- Select address
- Upload issue video/images
- Select date and time
- Describe the issue
- Track booking status
- Receive estimated bill
- Accept/reject bill
- Pay automatically from wallet
- Chat with admin/provider
- Track provider
- View service history
- View wallet transactions
- Raise disputes
- Complete service through OTP verification
- View before/after service media
- Receive notifications

2.3 Provider App

The Provider App will allow service providers to:

- Register/Login
- Complete provider profile
- Manage availability
- Receive assigned bookings
- View customer details
- View service details
- View customer-uploaded issue videos/images
- Navigate to customer location
- Start service
- Inspect the issue

- Communicate findings to admin
- Receive bill/service approval status
- Complete assigned service
- Upload before-service media
- Upload after-service media
- Request customer OTP
- Complete booking
- View completed jobs
- View earnings/service history
- Receive notifications
- Communicate through chat

---

3. User Registration & Onboarding Flow

Step 1 – Mobile Number Registration

User enters:

- Mobile Number

The system sends an OTP.

OTP Verification

User enters the OTP.

If OTP is correct:

Mobile Number Verified → Continue to Basic Details

If OTP is incorrect:

- Show error
- Allow resend OTP
- Apply resend timer

Step 2 – Basic Details

User provides:

- Full Name
- Email
- Date of Birth (optional)

- Gender (optional)
- Profile Picture
- Address information

After submitting basic details, the user proceeds to subscription plan selection.

---

4. Subscription Plan Flow

Admin will create and manage subscription plans.

Example plans:

Plan	Recharge Amount	Wallet Credit
Silver	₹1 Lakh	₹1 Lakh
Gold	₹5 Lakh	₹5 Lakh
Platinum	₹10 Lakh	₹10 Lakh

> The actual plan names, prices, validity, service coverage and other rules will be configurable from the Admin Panel.

User Flow

Register → Verify OTP → Basic Details → Select Plan → Purchase Plan → Wallet Credited

The available plans created by Admin will automatically appear in the User App.

Each plan can contain:

- Plan Name
- Plan Price
- Wallet Credit
- Validity
- Applicable Services
- Service Limits/Rules
- Description
- Status
- Terms & Conditions

---

5. Home/Property Verification

After purchasing a plan, the user will be required to upload or record a video of their home/property.

User Flow

Purchase Plan → Upload/Record Home Video → Submit → Verification/Processing → Home Page

The video will be stored against the user's profile/property.

Admin should be able to view this video from the User Management section.

Possible status:

- Pending
- Under Review
- Approved
- Rejected

If Admin approval is required, the user will proceed to the home page after successful approval.

---

6. User App Home Page

After onboarding, the user will land on the Home Page.

Home Page Components

- Header
- Profile
- Wallet Balance
- Notifications
- Search
- Categories
- Popular Services
- Recent Bookings
- Offers/Banners
- Active Booking
- Subscription information

Wallet

Wallet will be prominently displayed at the top-right section.

Example:

Wallet Balance: ₹5,00,000

The wallet amount represents the user's available service balance.

---

7. Bottom Navigation

The User App will have a bottom navigation bar containing:

1. **Home**
2. **Categories**
3. **Bookings**
4. **Profile**

Wallet can be accessed from the Home Page/header and also from the Profile section.

---

8. Category Management

Admin will create and manage the complete service hierarchy.

Example

Category: Electrical

Sub-categories may include:

- Home Electrical
- Kitchen Electrical
- Appliance Electrical
- Wiring
- Lighting

Each sub-category can contain multiple services.

Example

Kitchen Electrical → Services

- Mixer Repair
- Chimney Repair
- Microwave Repair
- Induction Repair
- Kitchen Wiring

Another example:

AC Services

- AC Repair
- AC Installation

- AC Gas Refill
- AC Maintenance
- AC Service

All categories, sub-categories, services, images and descriptions will be controlled from the Admin Panel.

---

9. Category Structure

The system will follow:

Category → Sub-Category → Service

Example:

Electrical → Kitchen Electrical
→ Mixer Repair

Electrical → Home Electrical
→ Switch Repair

Plumbing → Bathroom Plumbing
→ Tap Repair

Admin can:

- Add category
- Edit category
- Delete/deactivate category
- Upload category image
- Add sub-category
- Upload sub-category image
- Add service
- Add service image
- Add service description
- Configure service pricing/rules
- Activate/deactivate services

---

10. Booking Creation Flow

The user selects:

Step 1 – Category

Example:

Electrical

Step 2 – Sub-Category

Example:

Kitchen Electrical

Step 3 – Service

Example:

Mixer Repair

Step 4 – Address

User selects an existing address or adds a new address.

Address fields:

- Name/House Name
- House/Flat Number
- Street
- Locality
- City
- State
- Pincode
- Landmark
- GPS Location

Step 5 – Issue Video/Image

User can:

- Upload video
- Record video
- Upload images

This will help the provider/admin understand the problem before visiting.

Step 6 – Schedule

User selects:

- Date
- Preferred Time Slot

Step 7 – Issue Description

User enters:

"Mixer is making noise and is not starting."

Step 8 – Submit Booking

Booking is created with:

Status: Pending Admin Review

---

11. Booking ID

Every booking will automatically receive a unique Booking ID.

Example:

BK-2026-000125

The Booking ID will be used throughout the system.

It will be visible to:

- User
- Admin
- Provider

---

12. Admin Booking Review

Once the user submits the booking, it will appear in the Admin Panel.

Admin can view:

- Booking ID

- User details
- User phone number
- Service
- Category
- Address
- Date
- Time
- Issue description
- Uploaded images
- Uploaded video
- User wallet balance
- Subscription plan
- Booking history

Booking Status

Pending Review

Admin reviews the booking and assigns a suitable provider.

---

13. Provider Assignment

Admin selects a provider based on:

- Service type
- Provider expertise
- Location
- Availability
- Previous performance
- Current workload

Admin assigns the provider.

Booking status changes to:

Provider Assigned

The provider receives a notification.

---

14. Provider Booking Flow

Provider opens the Provider App and sees:

New Assigned Booking

Provider can view:

- Booking ID
- Customer name
- Contact details
- Address
- Category
- Service
- Issue description
- Customer-uploaded video/images
- Scheduled date/time

Provider accepts/acknowledges the booking.

Status:

Assigned → Accepted

---

15. Provider Visit

Provider reaches the user's home.

Provider can start the visit from the app.

Status:

Provider On The Way

then:

Provider Arrived

The provider checks the actual issue at the customer's home.

---

16. Issue Inspection

Provider physically inspects the problem.

The provider then communicates the actual issue and required work to Admin.

Example:

> Mixer motor has failed and requires motor replacement.

Provider can upload:

- Inspection images
- Inspection video
- Notes
- Required parts
- Required work
- Estimated service requirements

Admin receives this information.

---

17. Bill Generation

Based on the provider's inspection, Admin generates the final bill.

Bill may contain:

Item	Amount
Service Charge	₹2,000
Spare Part	₹4,500
Labour	₹1,500
Total	**₹8,000**

Admin sends the bill to the user.

Booking status:

Awaiting User Approval

---

18. User Bill Approval

User receives notification:

"Your service estimate is ₹8,000. Please review and approve."

User can:

Accept

The system automatically deducts the approved amount from the user's wallet.

Example:

Previous Wallet:

₹5,00,000

Bill:

₹8,000

Remaining Wallet:

₹4,92,000

Booking status:

Payment Approved → Service Approved

Reject

The user can reject the bill and optionally provide a reason.

Status:

Bill Rejected

Admin can then review and take appropriate action.

---

19. Wallet System

The wallet is the core payment mechanism of the platform.

Wallet Credit

Wallet is credited when the user purchases a subscription/recharge plan.

Example:

User purchases:

Gold Plan – ₹5,00,000

Wallet:

₹5,00,000

Wallet Debit

When a user accepts a service bill:

Approved Bill Amount → Automatically deducted from Wallet

Wallet Transaction Types

- Plan Purchase
- Wallet Credit
- Service Payment
- Refund
- Adjustment
- Cancellation Refund
- Admin Credit/Debit

Every transaction must have a unique transaction ID.

---

20. Insufficient Wallet Balance

If the bill amount is greater than the wallet balance:

Example:

Wallet:

₹5,000

Bill:

₹8,000

System should show:

Insufficient Wallet Balance

User can be redirected to:

Recharge/Subscription Plans

The service should not proceed until the required payment condition is fulfilled.

---

21. Service Execution

After the user approves the bill and payment is deducted:

Admin confirms/assigns the provider for service execution.

Status:

Service Approved → Provider Assigned → Service In Progress

Provider performs the required service.

---

22. Before & After Service Media

Before completing the service, provider must upload:

Before Service

- Photos
- Video

After completing the work, provider uploads:

After Service

- Photos
- Video

These media files are stored against the booking.

User and Admin can view them according to permissions.

---

23. Service Completion OTP

After the provider completes the service:

1. Provider marks service as completed.

2. System generates/sends OTP to user.
3. User provides OTP to provider.
4. Provider enters OTP.
5. System verifies OTP.
6. Booking is marked as completed.

Final Status

Service Completed

The OTP provides confirmation that the service was completed at the customer's property.

---

24. Complete Booking Status Flow

The complete booking lifecycle will be:

Booking Created

↓

Pending Admin Review

↓

---

25. Admin Dashboard

The Admin Dashboard will provide a complete overview of the platform.

Dashboard Cards

- Total Users
- Active Users
- Total Providers
- Active Providers
- Total Bookings
- Pending Bookings
- Active Bookings
- Completed Bookings
- Cancelled Bookings
- Disputed Bookings
- Total Revenue
- Wallet Transactions
- Active Subscriptions

Analytics

Charts can show:

- Daily bookings
- Monthly bookings
- Revenue
- Service category performance
- Provider performance
- User registrations
- Subscription purchases
- Completed services
- Cancelled services
- Disputes

---

26. Banner Management

Admin can manage banners displayed inside the User App.

Admin functions:

- Add banner
- Upload banner image
- Add title

- Add description
- Add CTA
- Set redirect
- Set start date
- Set end date
- Activate/deactivate
- Edit
- Delete

Banners may redirect users to:

- Category
- Service
- Subscription Plan
- Offer
- Specific page

---

27. User Management

Admin can:

- View users
- Search users
- Filter users
- View user profile
- View subscription
- View wallet balance
- View wallet transactions
- View bookings
- View service history
- View property/home video
- View disputes
- View complaints
- Block/unblock user
- Activate/deactivate account
- Adjust wallet where authorized
- View payment history

---

28. Provider Management

Admin can:

- Add provider

- Approve provider
- Reject provider
- Edit provider
- Activate/deactivate provider
- Block provider
- Assign services
- Assign categories
- View provider location
- View availability
- View booking history
- View completed services
- View ratings/reviews
- View performance
- View disputes
- View documents
- Manage provider status

Provider Status

- Pending
- Approved
- Rejected
- Active
- Inactive
- Blocked

---

29. Subscription Plan Management

Admin can create unlimited subscription plans.

Plan fields:

- Plan Name
- Plan Price
- Wallet Credit
- Validity
- Service Coverage
- Service Rules
- Description
- Features
- Terms & Conditions
- Status

Admin can:

- Create

- Edit
- Activate
- Deactivate
- Delete
- View purchases

---

30. Booking Management

Admin can view all bookings.

Filters:

- Booking ID
- User
- Provider
- Category
- Service
- Date
- Status
- Location
- Payment Status

Admin can:

- Review booking
- Assign provider
- Reassign provider
- Generate bill
- Modify bill
- Cancel booking
- Update status
- View media
- View chat
- View transaction
- Handle dispute

---

31. Dispute Management

Users and providers can raise disputes.

Examples:

- Incorrect bill

- Poor service
- Provider did not arrive
- Customer unavailable
- Service not completed
- Payment issue
- Damage complaint
- Other issue

Admin can:

- View dispute
- View booking
- View user
- View provider
- View uploaded evidence
- View chat
- Add internal notes
- Resolve dispute
- Reject dispute
- Issue refund
- Adjust wallet
- Reassign provider

Dispute statuses:

- Open
- Under Review
- Awaiting Response
- Resolved
- Rejected
- Closed

---

32. Live Chat

A live chat system will be available for communication.

User ↔ Admin

Users can communicate with Admin regarding:

- Booking
- Payment
- Bill
- Service
- Dispute
- General support

Provider ↔ Admin

Providers can communicate with Admin regarding:

- Booking
- Inspection
- Service requirement
- Parts
- Bill
- Customer issue
- Completion

Admin should have a centralized chat interface.

---

33. Notifications

Notifications will be generated for important events.

User Notifications

- OTP
- Registration
- Plan purchase
- Wallet credit
- Booking created
- Booking accepted
- Provider assigned
- Provider on the way
- Provider arrived
- Bill generated
- Bill approval required
- Payment deducted
- Service started
- Service completed
- Dispute update

Provider Notifications

- New booking
- Booking assignment
- Booking changes
- Customer details
- Bill approval
- Service approval
- Cancellation
- Dispute

- Admin messages

---

34. User Profile

Profile section will contain:

- Personal Details
- Profile Picture
- Mobile Number
- Email
- Addresses
- Subscription Plan
- Wallet
- Transaction History
- Booking History
- Disputes
- Notifications
- Support
- Terms & Conditions
- Privacy Policy
- Logout

---

35. Booking History

Users can view:

- Upcoming bookings
- Active bookings
- Completed bookings
- Cancelled bookings
- Disputed bookings

Each booking detail will contain:

- Booking ID
- Category
- Service
- Provider
- Address
- Date/time
- Issue
- Bill
- Payment

- Before media
- After media
- Status
- Chat
- Dispute option

---

36. Provider Service History

Provider can view:

- Upcoming bookings
- Active bookings
- Completed bookings
- Cancelled bookings
- Disputed bookings

Provider can access previous service details according to system permissions.

---

37. Address Management

Users can save multiple addresses.

Example:

- Home
- Office
- Other

Each address can be selected while creating a booking.

---

38. Media Management

The platform will support media uploads for:

User

- Home/property video
- Issue video
- Issue images

Provider

- Inspection images
- Inspection video
- Before-service media
- After-service media

Admin will be able to view required media from the relevant booking/user/provider record.

---

39. Roles & Permissions

Admin Panel should support role-based access.

Example:

Super Admin

Full access.

Operations Admin

- Users
- Providers
- Bookings
- Assignments
- Services

Support Admin

- Users
- Chats
- Disputes
- Complaints

Finance Admin

- Payments
- Wallets
- Bills
- Transactions
- Refunds

Permissions should be configurable.

---

40. Search & Filters

Search should be available across major modules.

User Search

- Name
- Mobile
- Email
- User ID

Provider Search

- Name
- Mobile
- Provider ID
- Service
- Location

Booking Search

- Booking ID
- User
- Provider
- Service
- Date

Transaction Search

- Transaction ID
- User
- Booking ID
- Amount
- Date

---

41. Payment & Transaction Management

Every financial activity should generate a transaction record.

Transaction fields:

- Transaction ID
- User ID
- Booking ID
- Type

- Amount
- Payment Method
- Wallet Balance Before
- Wallet Balance After
- Date & Time
- Status
- Reference ID

Transaction statuses:

- Pending
- Successful
- Failed
- Refunded
- Cancelled

---

42. Refund System

If a booking is cancelled or a dispute is resolved in the user's favour, Admin can initiate a refund.

Refund can be credited to the user's wallet.

Example:

Service payment:

₹10,000

Refund:

₹10,000

Wallet gets credited with:

₹10,000

Refund transaction should be recorded.

---

43. Service Pricing

Service pricing should be manageable through Admin.

Possible pricing models:

- Fixed Price
- Inspection-Based Price
- Labour + Parts
- Custom Estimate

For the described workflow, the primary model will be:

Inspection → Admin Estimate → User Approval → Wallet Deduction → Service

---

44. Cancellation

Cancellation rules should be configurable by Admin.

Possible cancellation stages:

Before Provider Assignment

Cancellation may be allowed.

After Provider Assignment

Cancellation may have restrictions.

After Provider Arrival

Cancellation may require Admin review.

All cancellation activity should be recorded.

---

45. Recommended Database Entities

The backend should maintain entities/tables/collections such as:

- Users
- User Profiles
- Addresses
- Providers
- Provider Services
- Provider Availability
- Categories
- Sub-Categories

- Services
- Subscription Plans
- User Subscriptions
- Wallets
- Wallet Transactions
- Bookings
- Booking Items
- Booking Status History
- Bills
- Bill Items
- Payments
- Refunds
- Media
- Chats
- Chat Messages
- Disputes
- Notifications
- Banners
- Reviews/Ratings
- Admin Users
- Roles
- Permissions
- Audit Logs

---

46. Important Business Rules

1. User must verify mobile number before proceeding.
2. User must complete basic profile information.
3. User must purchase an available subscription/recharge plan before using services.
4. Wallet balance is created/credited according to the purchased plan.
5. User must submit required home/property video during onboarding.
6. Categories, sub-categories and services are controlled by Admin.
7. Every booking requires a valid address.
8. User can upload issue media before submitting a booking.
9. Every booking must be reviewed by Admin.
10. Provider assignment is controlled by Admin.
11. Provider must inspect the actual issue before final billing.
12. Final bill must be approved by the user.
13. Approved bill amount is automatically deducted from the user's wallet.
14. Service execution should proceed only after required payment approval.
15. Provider must upload before/after service media.
16. Service completion requires user OTP verification.
17. All wallet transactions must be recorded.
18. All booking status changes must be logged.
19. Disputes must be handled through the Admin Panel.

20. Admin should have complete visibility of booking, payment and service history.

---

---

52. Final Product Objective

The objective of the platform is to create a **controlled, prepaid home-service ecosystem** where:

User purchases a service plan → receives wallet balance → selects a service → creates a booking → Admin reviews it → Provider visits the property → issue is inspected → Admin generates the estimate → User approves → wallet is automatically charged → Provider performs the service → before/after proof is uploaded → User confirms completion through OTP → booking is closed.

The **Admin Panel remains the central operational layer** controlling users, providers, plans, wallet transactions, categories, services, bookings, billing, assignments, disputes, communication and platform configuration.
